

Role Audio

the best small loudspeakers

The Canoe: *explore the inner realm of music*

The Canoe, like the other of Role Audio loudspeakers, is designed to deliver large loudspeaker performance in the smallest possible design. It is designed to be the most powerful loudspeaker of its size.

Although it measures only 5.5 inches wide by 16 inches high by 6.5 inches deep the Canoe will fill any moderately sized room with accurate, full range, non-fatiguing music.

It is beautiful enough to place almost anywhere. And it is fully magnetically shielded so it may be placed near to CRTs. You can play loudly or softly. Either way, it will surprise.

The cabinet of the Canoe is constructed from health friendly, certified green, red birch plywood and CARB2, no urea formaldehyde added, medium density fiber board. It is assembled with non-toxic glues and materials. You can enjoy your music knowing the Canoe is great for the indoor air and outdoor environment.

From its immaculately finished folded transmission line cabinets, which are constructed in-house for the highest quality control, to its transducers and crossover components, no cost is spared. The Canoe uses one of the finest soft dome tweeters available which is closely mated to an extraordinarily accurate woven carbon fiber cone woofer to form a near point source.

Some of the Canoe's design features are unprecedented for a speaker at its price point: film foil capacitor, metal oxide

resistor, laminated perfect lay coil, DH Labs silver plated copper wire to the tweeter, and oxygen free multi-strand copper wire to the woofer. Then we outfit the Canoe with the Superior™ five-way binding posts, some of the finest in the industry.
