The Sampan DTL: *power to surprise*

The Sampan DTL is a powerful mini tower loudspeaker that offers exquisite performance in a very compact package, with and twice the output of our highly acclaimed Sampan.

It features our proprietary double transmission line design that delivers stunning bass reproduction in the most compact designs.

The Sampan DTL produces an incredible soundstage with the kind of finesse that is not often found even in smallest high-end minimonitors, yet it has dynamic ease and bass performance that is not found in most loudspeakers that are even a few times its size.

With its huge, accurate soundstage, the Sampan DTL reproduces music with a realism that is palpable and emotional, and rewards the listener with endless musical adventures.

Although it measures only 4 inches wide by 41 inches high by 6.25 inches deep, the Sampan DTL is designed to meet the needs of demanding music lovers who want the performance of a large speaker without sacrificing their living space. It is suited for high-end two-channel stereo and home theater.

And, like the rest of the Role line, the beautiful handcrafted cabinets show that we pay full attention to our loudspeakers as objects of art.
